

**WELCOME**

**TO ONE OF MY  
MOST EXCITING  
APPS!**

# FRONT-END

Being built on Flutter, the front-end is naturally structured with a series of screen files that communicate between each other, all of them containing widgets and methods built with Dart.

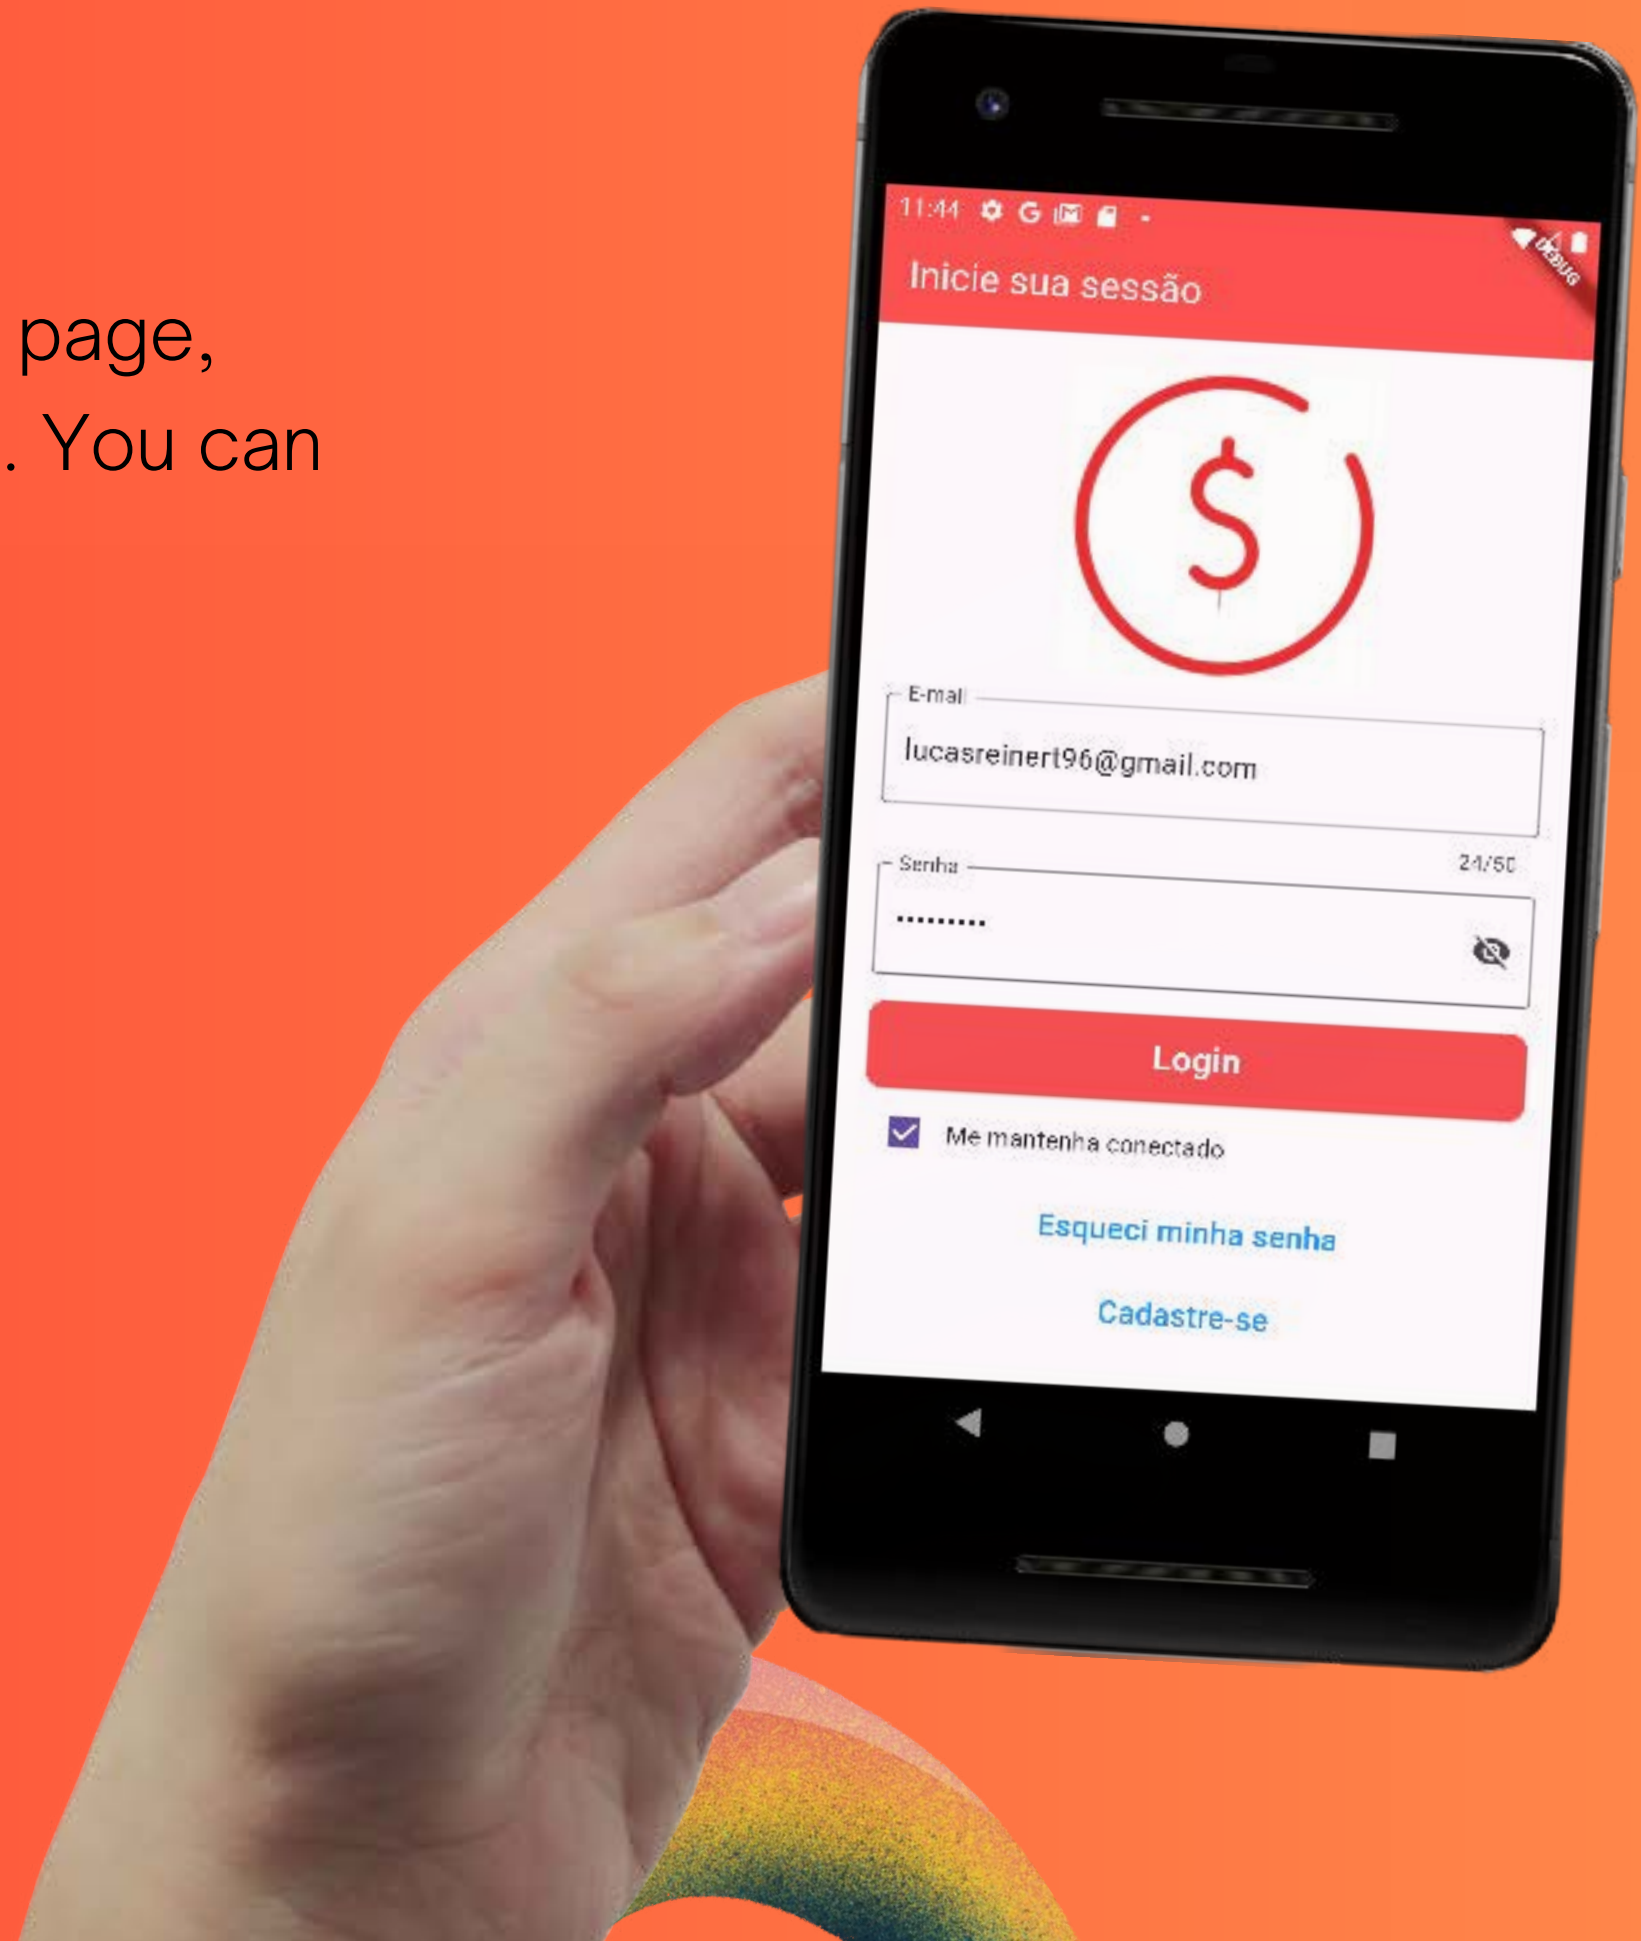

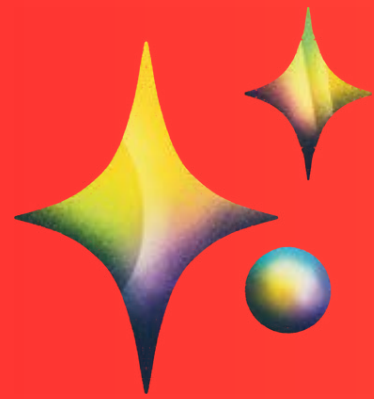

# BACK-END

We're using a PostgreSQL database and a Flask-built API with a collection of endpoints to store and relay data. The server's hosted at Railway and the API at Render (it's a free instance so expect a small delay upon first access).

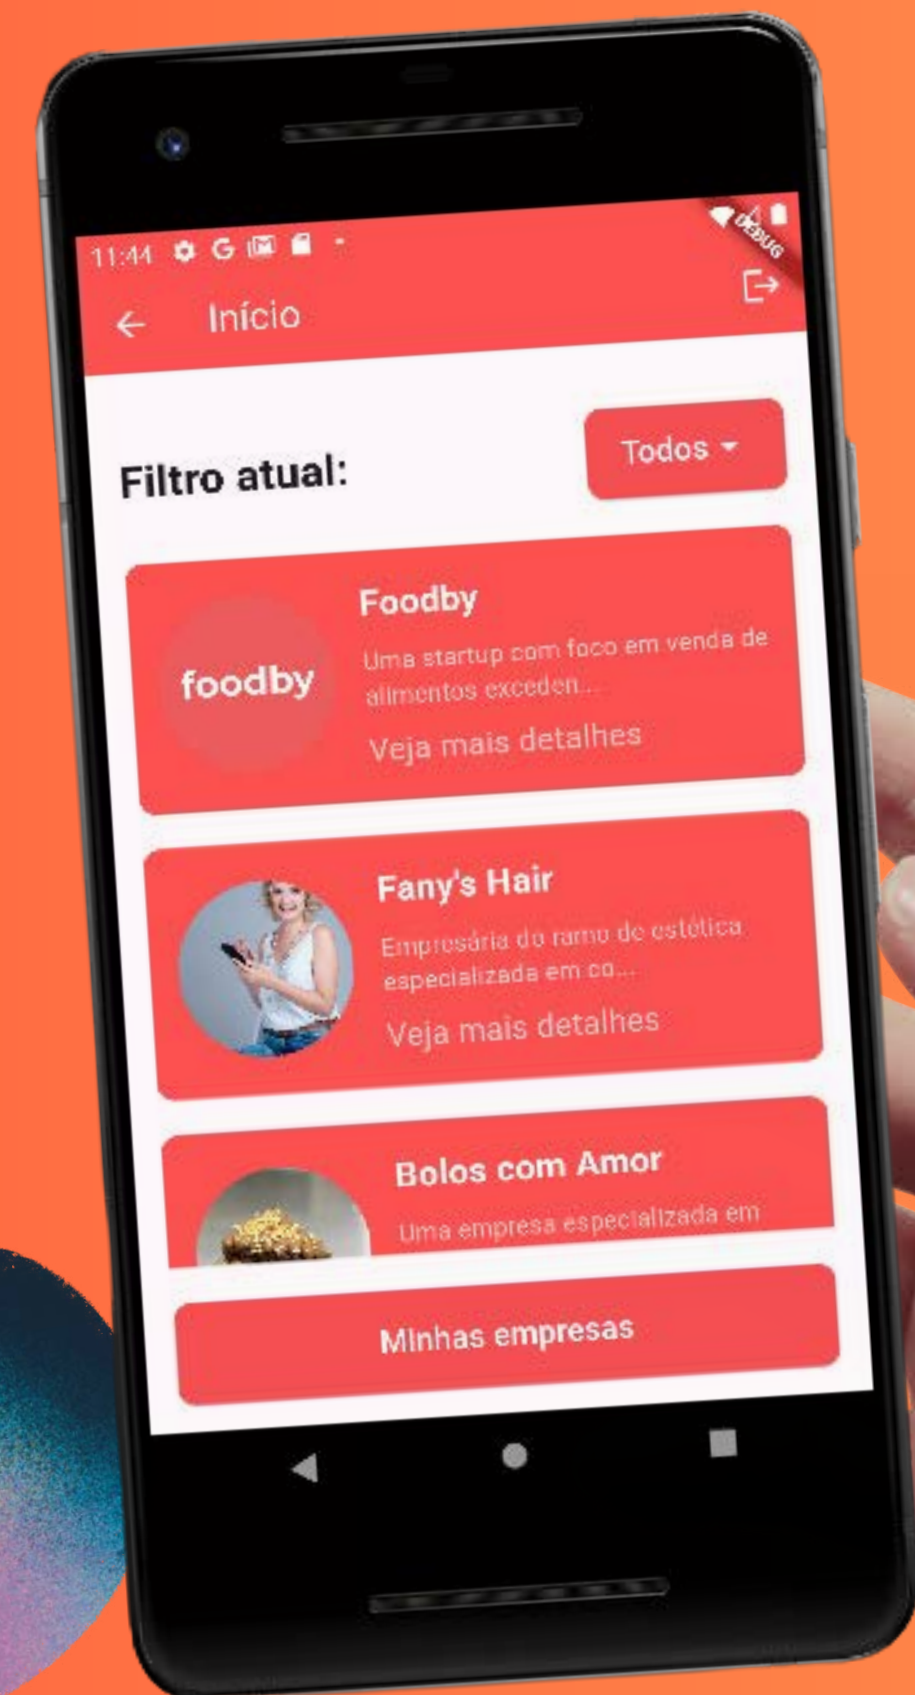

# LOGIN SCREEN

Here you'll find the basic structure of a login page, everything is functional and thoroughly tested. You can even reset your password if you want it!

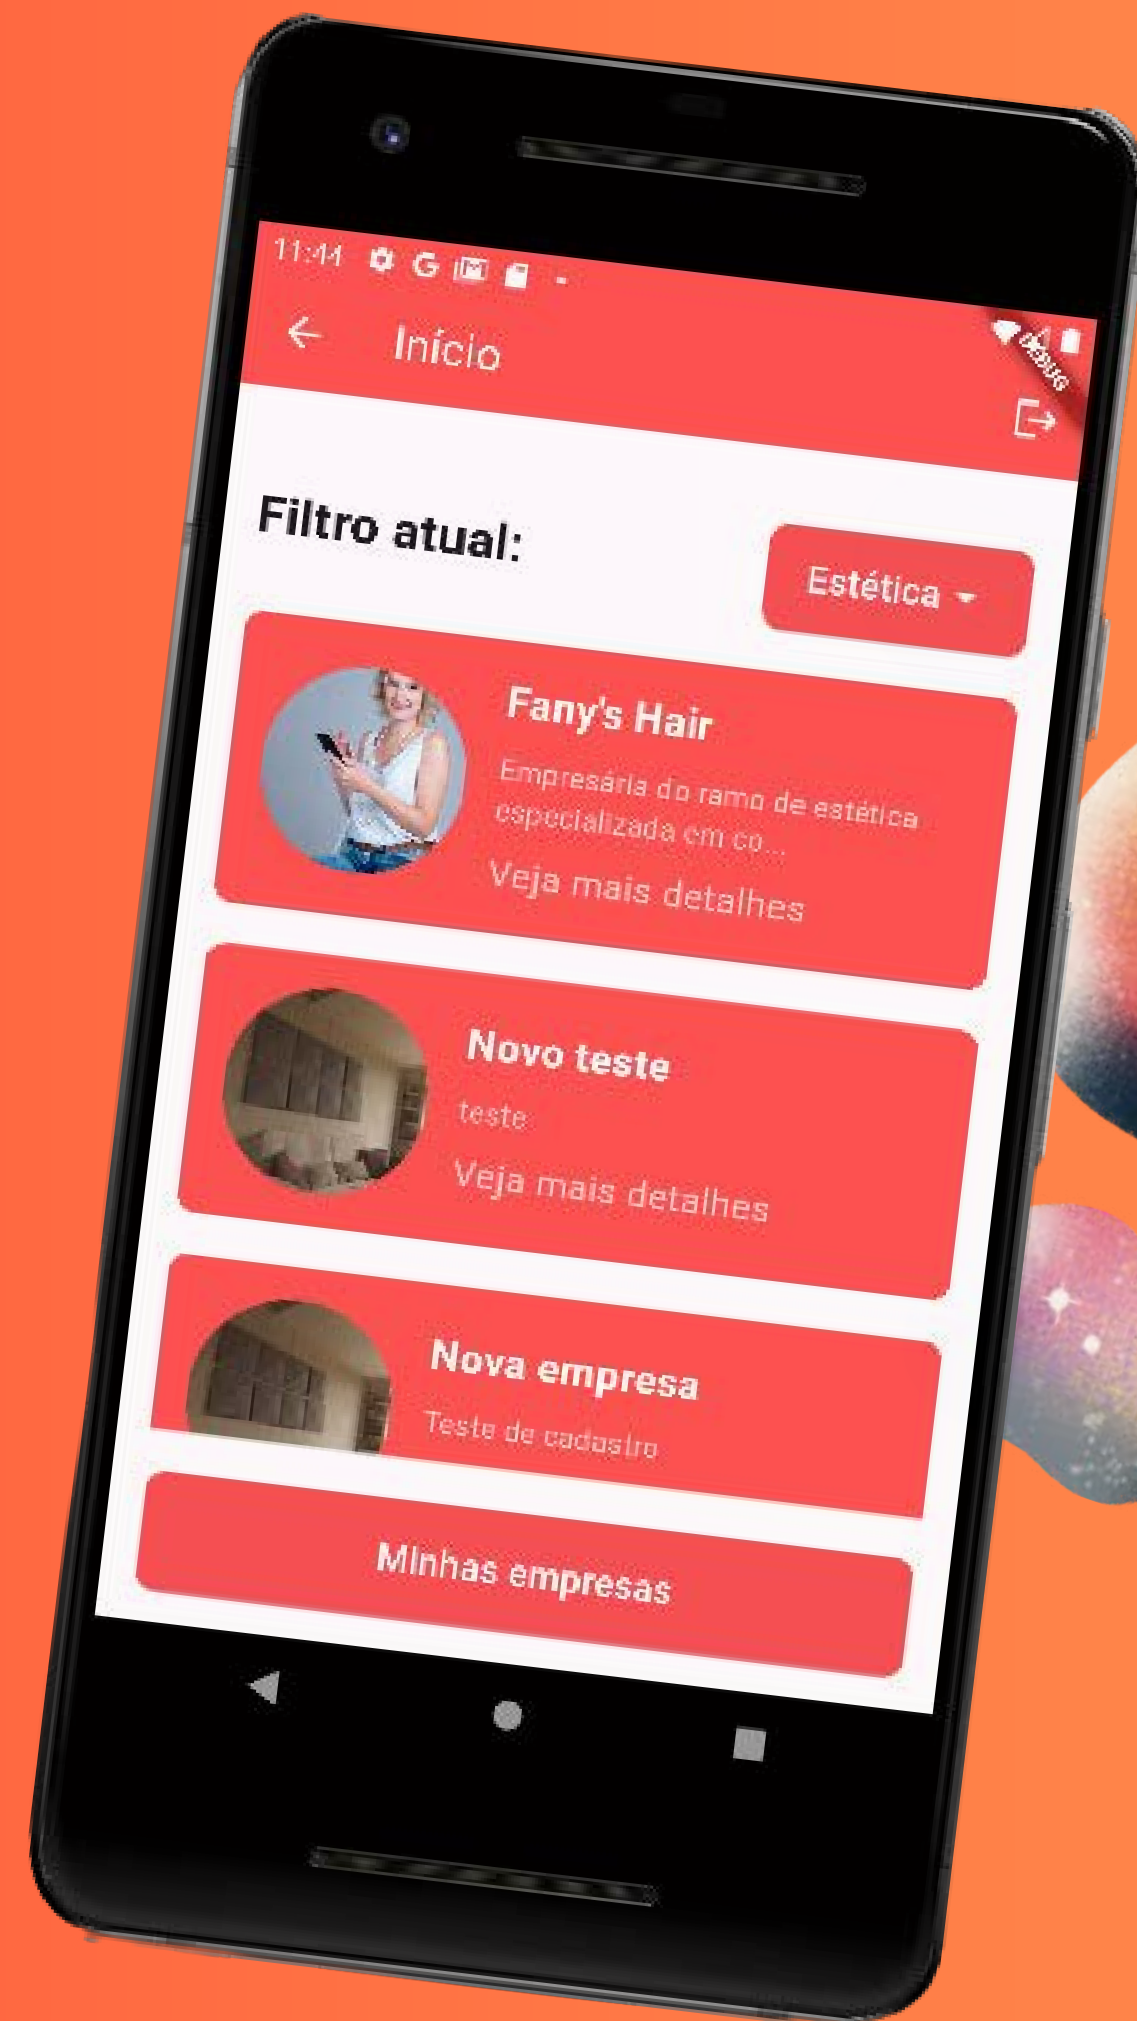

# HOME SCREEN

On the login screen, if you choose to remain connected (that little checkbox under the password input), this will be your landing page. Here you'll find all of the business cards available on the app.

**YOU CAN EVEN FILTER  
THE BUSINESS CARDS  
BY SEGMENT, CHECK  
THIS OUT:**

# COMPANY DETAILS SCREEN

By pressing on any business card on Home Screen, you'll be able to access their public details, such as contact options, segment, a full description and a Whatsapp button that takes you directly to the company's inbox.

**THE DESCRIPTION  
SECTION IS A POPUP,  
TAKE A LOOK:**

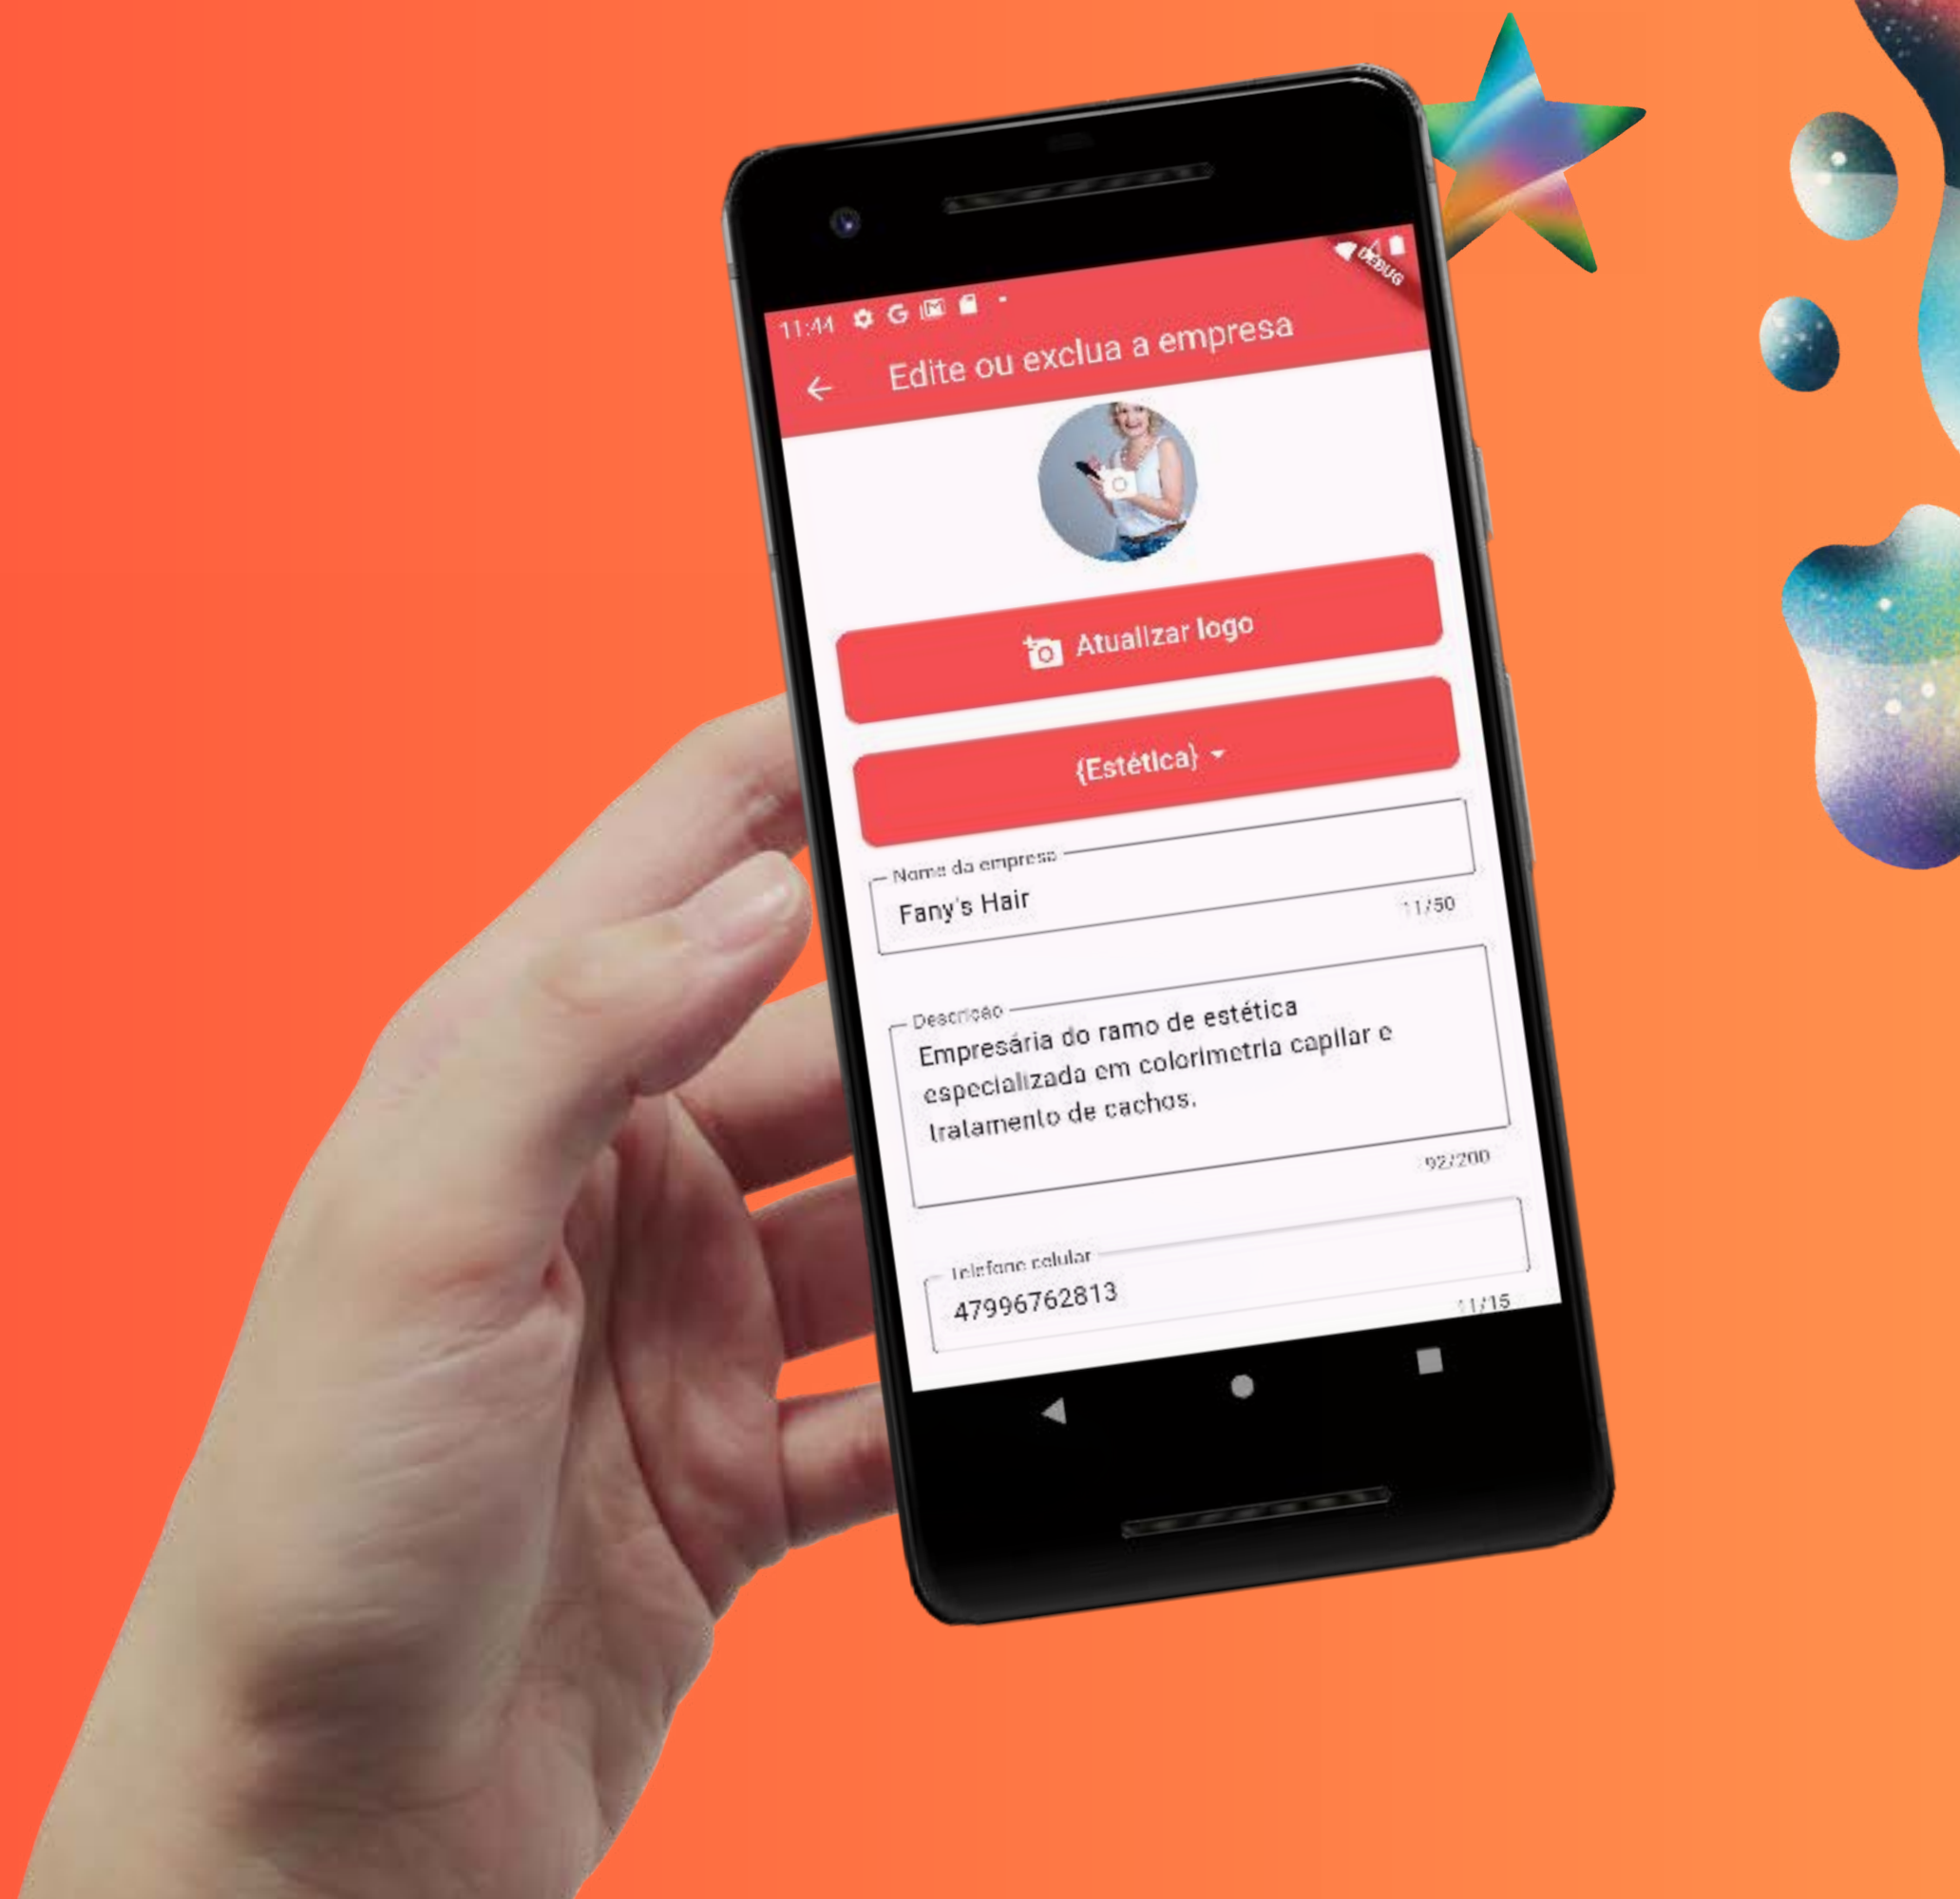

# COMPANY SCREEN

This is your personal dashboard, where you'll find only your business cards.

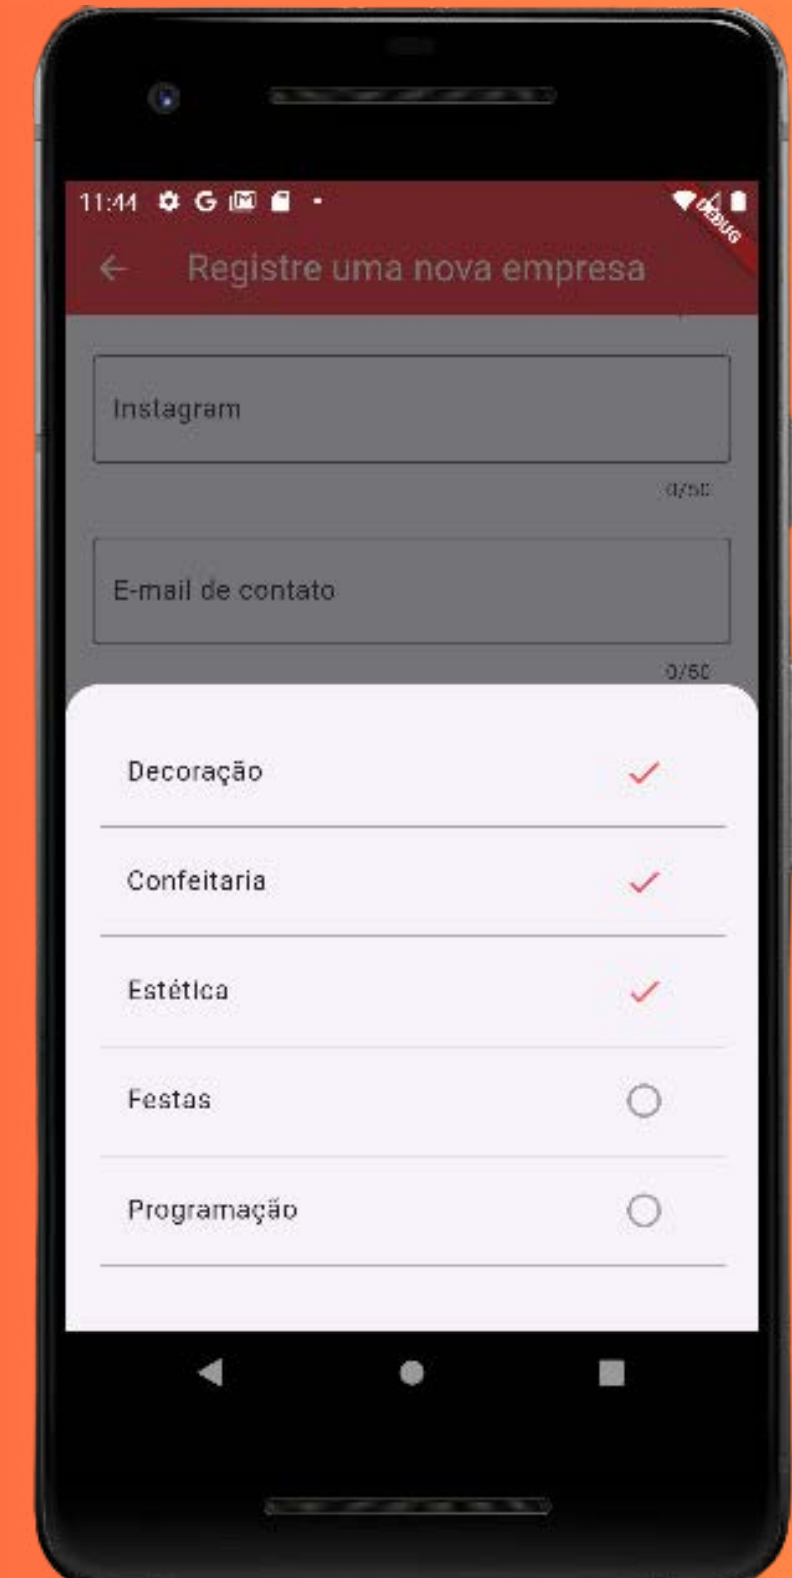

If you want to edit or delete a business card, press on it and you'll find the Update/Delete screen:

# REGISTER COMPANY SCREEN

Now here is where the fun begins, add as many business cards as you want, choose a cool logo and set all of your segments (yes, you can choose multiple segments), then save the whole thing and you're good to go!

# WHERE CAN I DOWNLOAD THE APP?

Well, we haven't uploaded it to Play Store just yet, but we're planning to.

The only problem is... it doesn't have a name yet!

But one thing is for sure: its V1 is a go, but there's so much to improve and there's plenty of time for me to apply those improvements. The name will present itself soon enough, and you'll be hearing it quite a lot.

For now, you can access the link below and contact me for more information and to test the app on your own device, if you feel like giving it a try. Here's the link:
