Livro: Reservoir Sediment Management

1 Conceptual framework of reservoir sedimentation
   1.1 World reservoir sedimentation
   1.2 Changing paradigm from design life approach to a life cycle approach
   1.3 Sustainable development of basin water storage capacity

2 Theoretical aspects of sediment transport
   2.1 Sediment properties
   2.2 Modes of sediment transport
   2.3 Siltation mechanism
   2.4 Prediction of reservoir deposition
   2.4.1 Prediction of the useful life of a reservoir
   2.5 Mathematical models
      2.5.1 Saint-Venant-Exner equations
      2.5.2 Developed methods for the solution of Saint-Venant equations
      2.5.3 Developed computer models for aggradation and degradation processes
      2.5.3.1 Prediction of delta formation
      2.5.4 Application of DELTA
      2.5.5 Comparison with the sediment data of Çubuk 1 Dam Reservoir

3 Techniques for prevention of sediment deposition
   3.1 Preventing sediment inflow
      3.1.1 Watershed management
      3.1.2 Upstream check structures (Debris dams)
      3.1.3 Reservoir bypass system
   3.2 Sustainable management of the dams
      3.2.1 Evacuation of sediments from reservoir
         3.2.1.1 Flushing
         3.2.1.2 Sluicing
         3.2.1.3 Density current venting
         3.2.1.4 Mechanical removal
      3.2.2 Management techniques of sediment within a reservoir
      3.3 Lost storage replacement techniques and decommissioning
         3.3.1 Raising dam height
         3.3.2 Building a new dam
         3.3.3 Decommissioning

4 Performance of reservoir conservation model
   4.1 The general working principle of RESCON
   4.2 Working principle of RESCON for technical optimization
      4.2.1 Technical principle of flushing in RESCON
      4.2.2 Technical principle of HSRS in RESCON
      4.2.3 Traditional dredging and trucking technical principle in RESCON
   4.3 Economic optimization working principle of RESCON
      4.3.1 Flushing
      4.3.2 HSRS 81
      4.3.3 Dredging (traditional)
4.3.4 Trucking
4.3.5 Unit cost of the evacuation methods used in RESCON
4.4 Evaluation and comments about economic results of RESCON

5 Cost analyses
5.1 Case studies from Turkey
5.2 Historical background of dam construction in Turkey: Experience, lessons, malpractices
5.2.1 Reservoir sedimentation in Turkey
5.2.2 River basins
5.2.3 Measurement of deposition in reservoir lakes
5.3 Case studies for water supply dams
5.3.1 Economical Parameters in Turkey for case studies
5.3.2 Selection criteria for dams
5.3.3 Domestic water supply dam, Çubuk Dam-I
5.3.4 Irrigation water supply dam, Ivriz Dam
5.4 Case studies for hydropower dams
5.4.1 General overview of Coruh Basin Project
5.4.1.1 Muratlı dam

6 Sensitivity analysis of RESCON
6.1 Unit value of the reservoir yield
6.2 Discount rate
6.3 Market interest rate
6.4 Salvage value
6.5 Discussions about RESCON input values
6.5.1 Unit Benefit of Reservoir Yield (P1)
6.5.2 Total cost of dam construction
6.5.3 Salvage value
6.6 Strength and limitations of RESCON
