

Livro: Solar Cell Technology and Applications

Preface

1 Chronological History and Scientific Advancements in the Development of Solar Cell Technology

2 Design Expressions and Critical Performance Parameters for Solar Cells

3 Classification of Solar Cells Based on Performance, Design Complexity and Manufacturing Costs

4 Techniques to Enhance Conversion Efficiencies of Solar Cells

5 Solar Cells Deploying Exotic Materials and Advanced Design Configurations for Optimum Performance

6 Solar Cell and Array Designs Best Suited for Space Applications

7 Design Requirements for Stand-Alone and Grid-Connected PV Systems

8 Performance Capabilities and Economic Benefits of Potential Alternate Energy Sources

Index
