

Table of contents

Preface	ix
Organization	xi
Sponsors	xiii
<i>Keiichi Fujita lecture</i>	
Amazing underground construction technology in Japan <i>H. Akagi</i>	3
<i>Keynote lectures</i>	
Case studies and monitoring of deep excavations <i>M. Korff</i>	23
EPB granular soil conditioning under pressure <i>M.A. Mooney, Y. Wu, D. Parikh & L. Mori</i>	33
Recent underground construction projects in Korea—from rock to soft ground <i>C. Yoo</i>	47
<i>Deep excavations</i>	
Design and construction of the substructure of a commercial development in Bogota city using a top-down sequence <i>G. Clavellina-Miller, O. Martínez-Galvis, J. Paulín-Aguirre, T. Jeanmaire & J.-I. López</i>	63
Deep excavations stabilization with ground improvement or cross walls: A comparison of both stabilization methods <i>G.A. Pittaro</i>	69
Ground movement estimation for underground box structures: Movements at corners <i>J. McCallum, G.R. Taylor, J. Birks & Y.S. Hsu</i>	75
Analytical calculation of lateral earth pressure in finite soils considering displacement of retaining wall <i>X. Yang & G. Liu</i>	81
<i>Interaction with adjacent structures</i>	
Effects of deep soil mixing and jet grouting on adjacent retaining walls and ground <i>Y.P. Dong & A.J. Whittle</i>	91
Parametric study of the impact of deep excavation on an existing metro station <i>M. Mitew-Czajewska</i>	97
Pile tunnel interaction: An analytical framework <i>T.G.S. Dias & A. Bezuijen</i>	105
Pile tunnel interaction during mechanized tunnelling <i>T.G.S. Dias & A. Bezuijen</i>	111

Mechanized excavations

- Slurry infiltration ahead of slurry TBM's in saturated sand: Laboratory tests and consequences for practice 121
T. Xu, A. Bezuijen & T.G.S. Dias
- A simplified chamber pressure model for EPB TBM tunneling in granular soil 127
H. Yu, M.A. Mooney & A. Bezuijen
- Excavation cycle dependent changes of hydraulic properties of granular soil at the tunnel face during slurry shield excavations 137
Z. Zizka, B. Schoesser & M. Thewes
- Rheology of foam-conditioned sands: Transferring results from laboratory to real-world tunneling 145
S. Freimann, M. Galli & M. Thewes
- Grout pressure distribution during TBM tunnelling 153
T.G.S. Dias & A. Bezuijen
- Numerical investigation of hydromechanical interactions at the tail void of bored tunnels due to grouting 161
A.A. Lavasan & T. Schanz
- Numerical study of segmental tunnel lining behavior during mechanized tunneling 171
S. Fabozzi & E. Bilotta
- Operative techniques for Earth Pressure Balanced Shield in saturated soft soils 179
C. Chanchaya
- Tropical residual soil data compilation as guidance for laboratory tests and EPB excavation process simulation 185
D.G.G. de Oliveira, M. Diederichs, L.L. Rasmussen & M.O. Cecilio Jr.

Sequential excavations

- A new method for the prediction of settlements due to urban tunneling in soft ground 197
N. Gilleron, A. Sai'tta & E. Bourgeois
- Deformations caused by the excavation of twin tunnels 203
A. Pedro, T. Cancela, J. Almeida e Sousa & J. Grazina
- K_0 parameter influence in tunneling superficial settlements and in liner stresses 215
V. Armigliato, A.C.G. da Silva & C.M.A. Prado
- Analytical and numerical models for evaluation of tunnel excavation stability in a multi layered soil profile with groundwater flow 223
L.E. Sozio
- Investigation of influence zones induced by shallow tunnelling in soft soils 233
M.N. Vu, W. Broere & J.W. Bosch
- Effect of construction sequence of three-arch tunnel on center structure—numerical investigation 239
J.H. Choi, J.S. Song, Q. Abbas & C. Yoo
- Assessment of train-load-induced ground and tunnel settlement with the effect of leakage 245
Z.K. Huang, D.M. Zhang, H.W. Huang, Y. Li & S.J. Feng
- Numerical analysis of large-sectional pipe arch aided tunneling from ground movement perspective 253
X. Xie, Z.H. Li, D.M. Zhang & H.W. Huang

Physical modelling and field tests

- Study on potential area of chloride ion attack in subway tunnel from view point of chloride ion penetration route in ground and concrete of tunnel lining 261
S. Konishi, T. Kawabata & K. Kamei

Predictions of changes in pore-water pressure around tunnels in clay <i>S. Divall, R.N. Taylor, S.E. Stallebrass & R.J. Goodey</i>	271
The role of building dimensions and position on the response of buildings to tunnelling subsidence: Centrifuge modelling <i>S. Ritter, G. Giardina, M.J. DeJong & R.J. Mair</i>	277
The role of building position on the response of buildings to tunnelling subsidence: Numerical modelling <i>G. Giardina, S. Ritter, M.J. DeJong & R.J. Mair</i>	287
Centrifuge modelling of shaft excavations in clay <i>N.E. Faustin, M.Z.E.B. Elshafie & R.J. Mair</i>	295
Field measurements of ground movements associated with circular shaft construction <i>N.E. Faustin, R.J. Mair, M.Z.E.B. Elshafie, C.O. Menkiti & M. Black</i>	301
Effects of wall embedment on base heave failure arising from deep excavations in soft soils <i>J.P. Panchal, S.E. Stallebrass & A.M. McNamara</i>	309
Collapse behaviour of large rectangular tunnel in cement-admixed soils <i>M.F.B. Zulkefli, A. Tyagi & F.H. Lee</i>	317
<i>Case histories</i>	
Large-scale improvement of converting a Japan's first subway station constructed by the shield tunneling method into that of an open-cut method: Kiba Station on the Tozai Line <i>K. Hiromoto, H. Hashiguchi & Y. Arai</i>	327
Ground response to tunnel construction for Jakarta Mass Rapid Transit Project <i>H. Hendarto & J.R. Standing</i>	335
Imposed longitudinal settlement on a cast-iron tunnel from the excavation of a new tunnel beneath <i>M. Alhaddad, M. Wilcock, C. Y. Gue, M.Z.E.B. Elshafie, K. Soga, R.J. Mair, M. Devriendt & P. Wright</i>	343
PAT TBM improving—a case of study to Metro São Paulo <i>D. Agnella, W.J. Giannotti, M.A. Rosatti Filho & T.O. Pires</i>	355
Author index	361
