

CONTENTS

CHAPTER 1 - BACKGROUND IN HYDROLOGY AND PEDOLOGY	11
1.1 Hydrological cycle and water balance	13
1.2 Hydrological models for water balance	22
1.3 Interweaving soil and hydrology sciences	27
1.4 Soil, hydrology and land use relationship	31
1.5 Pedological survey as a tool for Hydropedology	35
1.5.1 Soil surveys in Brazil	36
1.5.2 Soil mapping as a support for hydrological investigations	38
1.6 References	42
CHAPTER 2 - SOME MAIN TOOLS FOR HYDROPEDOLOGY STUDIES	51
2.1 Micromorphology analyses	53
2.2 X-Ray computed tomography (X-Ray CT)	57
2.3 Digital Soil Mapping tools	60
2.3.1 Fuzzy Logic methods	60
2.3.2 Conditioned Latin hypercube sampling method	63
2.3.3 Geomorphons	65
2.4 References	67
CHAPTER 3 - WATER BALANCE IN A FORESTED CRITICAL ZONE: A CASE STUDY FOR A HEADWATER REGION OF SOUTHEASTERN BRAZIL	75
3.1 Background ideas about forest hydrology	77
3.2 The description of the studied Critical Zone	78
3.3 Benchmark data	81
3.3.1 Observed meteorological conditions between 2009 and 2011 in the AFMC	81
3.3.2 Evapotranspiration	86
3.3.3 Soil moisture	87
3.3.4 Water balance	90
3.5 Concluding remarks	95
3.6 References	95

CHAPTER 4 - THE ROLE OF INCEPTISOLS IN THE HYDROLOGY OF MOUNTAINOUS CATCHMENTS IN SOUTHEASTERN BRAZIL	99
4.1 Introduction	101
4.2 Site Description	103
4.3 LCW weather characterization	106
4.4 The Upper Mountain Cloud Forest (UMCF)	107
4.5 Benchmarks data	107
4.5.1 Hydrological behavior of LCW and UMCF between 2009 and 2011	107
4.5.2 Properties of Inceptisols	111
4.5.3 Micromorphological analyses	116
4.6 Concluding remarks	118
4.7 References	118
CHAPTER 5 - KNOWLEDGE BASED INFERENCE MAPS FOR PREDICTING THE GROUNDWATER RECHARGE POTENTIAL	123
5.1 Introduction	125
5.2 Geomorphological characteristics of the Upper Grande River region	126
5.2.1 Climate	126
5.2.2 Land use	126
5.2.3 Geology	127
5.2.4 Soils and landscape	127
5.2.5 Two studied watersheds inside Upper Grande River basin	138
5.3 Potential of applicability from Hydropedology perspective	131
5.3.1 Scores and typical values of potentiality of groundwater recharge	131
5.3.2 Spatial prediction of the groundwater recharge potential at MCW and LCW	139
5.4 Considerations and suggestions for future studies	147
5.5 References	147
CHAPTER 6 - SPATIAL PREDICTION OF SOIL-WATER TRANSMISSIVITY BASED ON FUZZY LOGIC IN A BRAZILIAN HEADWATER WATERSHED	155
6.1 Introduction	157
6.2. Benchmarks data	159
6.3 Concluding remarks	165
6.4 References	165

CHAPTER 7 - HYDROPEDOLOGICAL APPROACH IN A MOUNTAINOUS CLAYEY HUMIC DYSTRUDEPT IN THE MANTIQUEIRA RANGE, SOUTHEASTERN BRAZIL	169
7.1 Introduction	171
7.2 Study area remarks	171
7.3 Benchmarks data	172
7.3.1 Characterization of the hydropedology elements for LCW	172
7.3.2 Micromorphology	180
7.3.3 Soil erosion and hydrological indicators	181
7.4 Concluding remarks	186
7.5 References	186
CHAPTER 8 - FINAL CONSIDERATIONS	191
8.1 References	196
