

Sumário

Second growth: the promise of tropical forest regeneration in an age of deforestation

List of Illustrations

Preface

Acknowledgments

Capítulo 1 – Perceptions of Tropical Forests and Natural Regeneration

1.1 Viewing Forests as a Cycle

1.2 The Resilience of Tropical Forests

1.3 Forest Regeneration, Succession, and Forest Degradation

1.4 The Geographic Extent of Deforestation and Regeneration

1.5 The Tropical Forests of the Future

Capítulo 2 – Ancient Human Legacies in Tropical Forest Landscapes

2.1 Overview

2.2 The Peopling of the Tropics

2.3 Impacts of Early Hunter-Gatherer Societies

2.4 The Development of Agriculture

2.5 Holocene Climate Variability and Agricultural Expansion

2.6 Conclusion

Capítulo 3 – Landscape Transformation and Regeneration through Prehistory

3.1 Overview

3.2 Earthworks and Landscape Transformations

3.3 Prehistoric Fires

3.4 Ancient Soil Modifications

3.5 Prehistoric Human Impacts in the Neotropics

3.6 Paleoecological Reconstruction

3.7 Conclusion

Capítulo 4 – Tropical Forest Dynamics and Disturbance Regimes

4.1 Overview

4.2 Disturbance Regimes

4.3 Gap Dynamics

- 4.4 Historical Tropical Forest Disturbance
- 4.5 Stability of Old-Growth Forests
- 4.6 Conclusion

Capítulo 5 – Successional Pathways and Transformations

- 5.1 Overview
- 5.2 Variability in Pathways
- 5.3 Successional Stages and Species
- 5.4 Forest Definitions
- 5.5 Approaches to Studying Succession
- 5.6 Conclusion

Capítulo 6 – Succession on Newly Created Substrates

- 6.1 Overview
- 6.2 Biological Legacies
- 6.3 Landslides
- 6.4 Volcanic Eruptions
- 6.5 Riverbank Succession
- 6.6 Conclusion

Capítulo 7 – Regeneration following Agricultural Land Uses

- 7.1 Overview
- 7.2 Effects on Propagule Availability
- 7.3 Effects on Site Quality
- 7.4 Conclusion

Capítulo 8 – Regeneration following Hurricanes and Fires

- 8.1 Overview
- 8.2 Hurricane Damage
- 8.3 Regeneration after Fires
- 8.4 Conclusion

Capítulo 9 – Regeneration following Logging and Land-Use Synergies

- 9.1 Overview
- 9.2 Harvesting Intensity and Disturbance
- 9.3 Effects on Animal Diversity
- 9.4 Consequences of Synergisms
- 9.5 Conclusion

Capítulo 10 – Functional Traits and Community Assembly

- 10.1 Overview
- 10.2 Environmental Gradients
- 10.3 Changes in Life-Form Composition

- 10.4 Early and Late Successional Traits
- 10.5 Functional Diversity
- 10.6 Community Assembly Model
- 10.7 Conclusion

Capítulo 11 – Recovery of Ecosystem Functions

- 11.1 Overview
- 11.2 Loss of Nutrients and Carbon
- 11.3 Accumulation of Carbon and Nutrients
- 11.4 Nutrient Cycling
- 11.5 Hydrology and Water Balance
- 11.6 Conclusion

Capítulo 12 – Animal Diversity and Plant-Animal Interactions

- 12.1 Overview
- 12.2 Animal Diversity in Regenerating Forests
- 12.3 Herbivory
- 12.4 Seed Dispersal and Predation
- 12.5 Pollination
- 12.6 Conclusion

Capítulo 13 – Tropical Reforestation Pathways

- 13.1 Overview
- 13.2 Reforestation Goals
- 13.3 Management of Forest Fallows
- 13.4 Ecological Restoration
- 13.5 Recovery of Biodiversity
- 13.6 Recovery of Ecosystem Properties
- 13.7 Conclusion

Capítulo 14 – Regenerating Forests in Tropical Landscapes

- 14.1 Overview
- 14.2 Land-Use Transitions
- 14.3 Landscape Context
- 14.4 Socioecological Drivers
- 14.5 Human Livelihoods and Regeneration
- 14.6 Conclusion

Capítulo 15 – Synthesis: The Promise of Tropical Forest Regeneration

- 15.1 The Power of Regeneration
- 15.2 Forest Change and Resilience
- 15.3 Future Value of Regenerating Forests
- 15.4 Approaches to Promoting Regeneration
