

Livro: Water and Climate: modeling in large basins

Preface

SEDIMENT TRANSPORT IN THE MIDDLE COURSE OF THE AMAZON RIVER

1. Introduction
2. The hydrographic and sedimentometric network
3. Hydrodynamic modeling
4. Sedimentometric data
5. Modeling sediment transport
6. Conclusions

References

CLIMATE CHANGE, WATER RESOURCES, AND ADAPTATIVE MANAGEMENT IN THE COLORADO RIVER BASIN

Abstract

1. Introduction
2. The Colorado River Basin
3. Climate change projections for the Colorado River Basin
4. Climate Change impacts: paleo-streamflow analogues
5. Institutions and adaptation to drought and climate change
6. Emerging issues Initiatives with Mexico an water-energy nexus
7. Conclusions

Acknowledgements

References

HYDRODYNAMICS OF THE AMAZON ESTUARY, FROM OBIDOS TO THE CONTINENTAL SHELF

Abstract

1. Introduction
2. Amazon River discharge and tides
3. Tidal propagation
4. Residual discharge distribution along the channels
5. Fresh water plume and salinity front

Acknowledgments

References

CLIMATE CHANGE AND WATER RESOURCES IN THE MURRAY-DARLING BASIN

Abstract

1. Introduction
2. The Murray-Darling River Basin
3. Institutional and policy framework
4. Climate change projections for the mdb
5. Adaptation to drought and climate change
6. Conclusions

Acknowledgements

References

HYDROLOGICAL SIMULATION IN AMAZONIA: THE MADEIRA RIVER

Abstract

1. Introduction
2. Hydrological model mgb-iph
3. Madeira River Basin
4. Simulations with mgb-iph model
5. Hydrological processes
6. Conclusions

References
